# Slope of Secant and Tangent Line

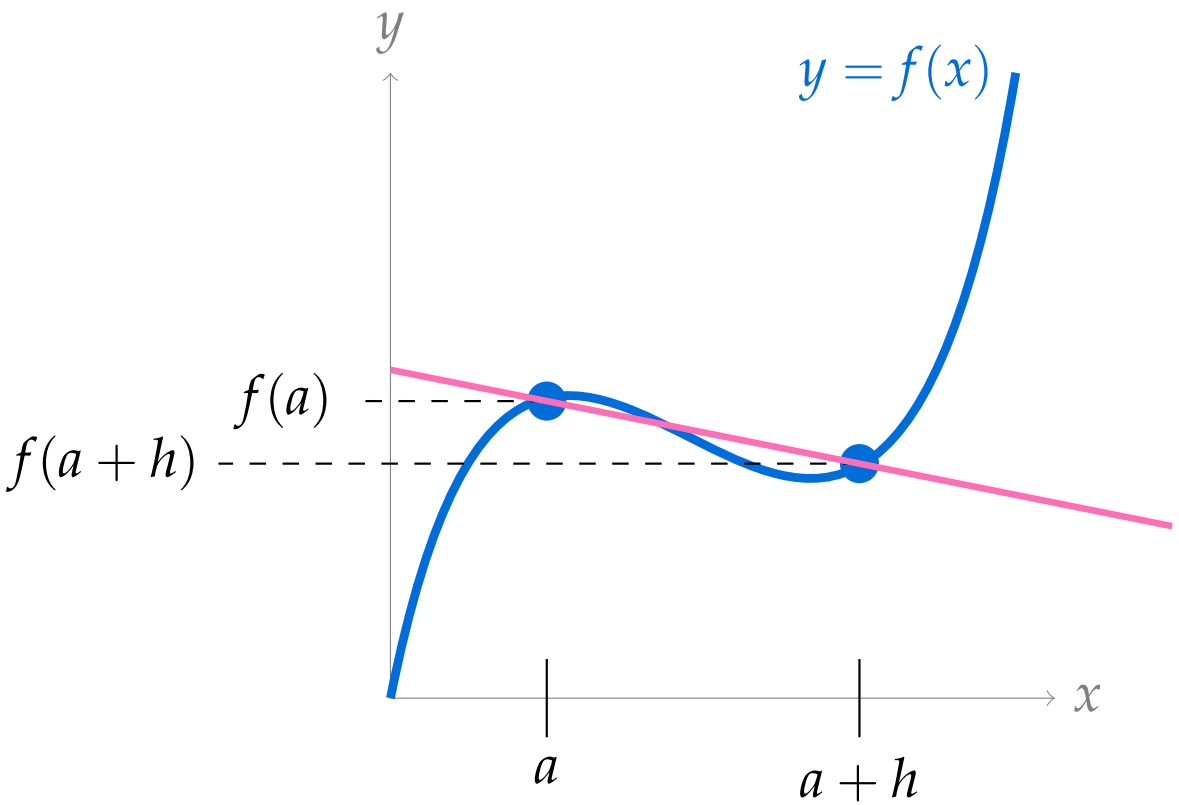

## Slope

Recall that the slope of a line is given by any of the following:

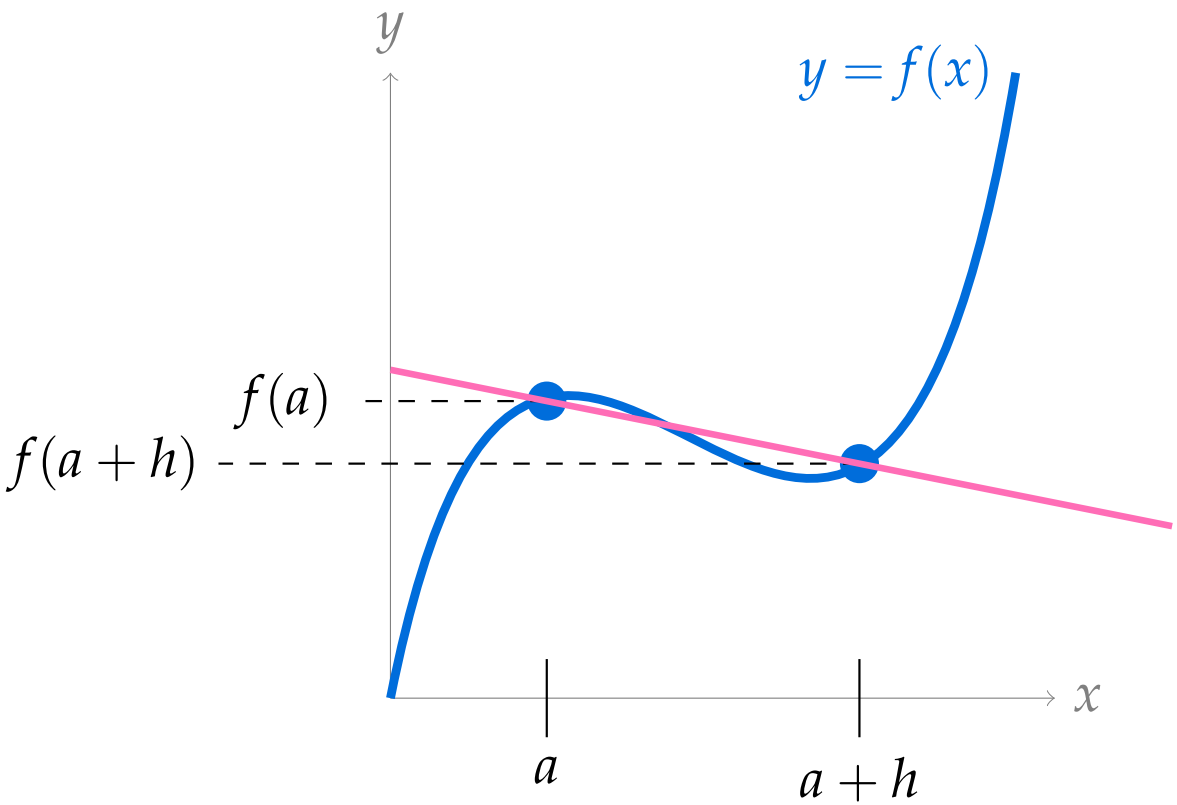

$$\frac{\text{rise}}{\text{run}} \qquad \frac{\Delta y}{\Delta x} \qquad \frac{y_2 - y_1}{x_2 - x_1}$$

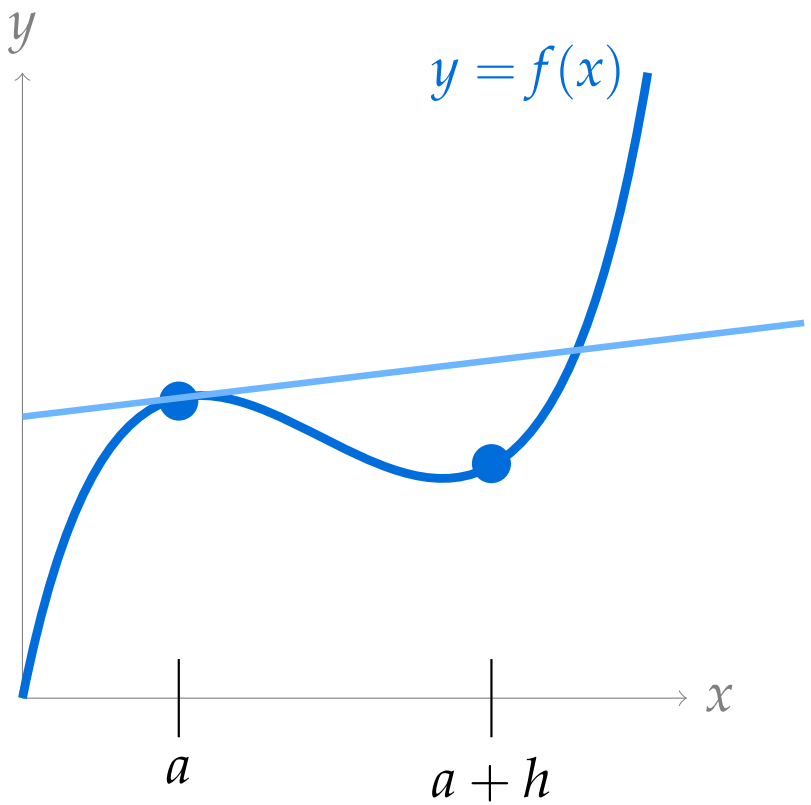

Slope of secant line:

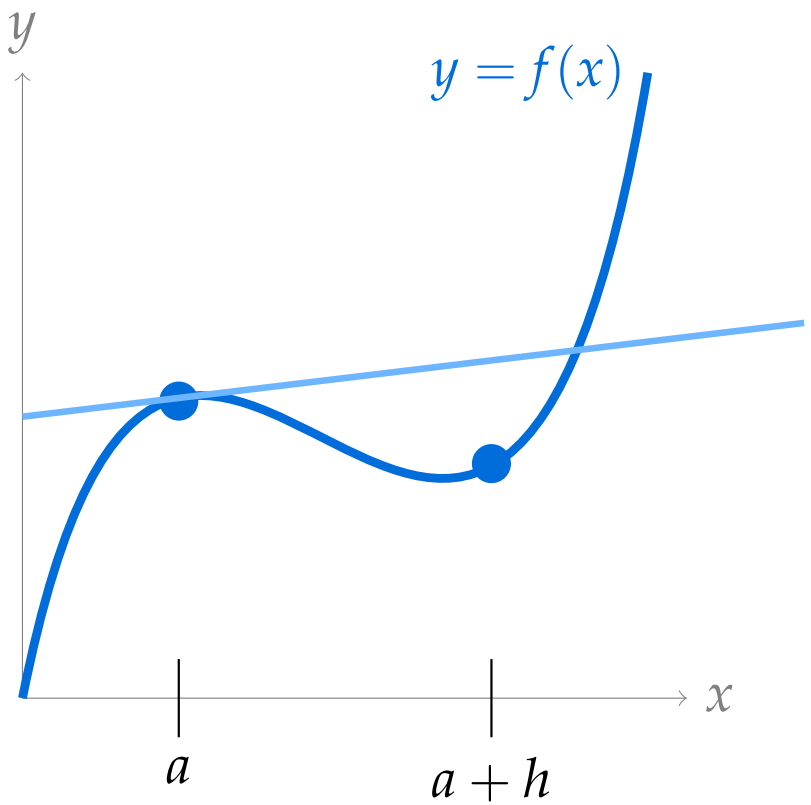

Slope of secant line:

Slope of secant line: $\frac{f(a+h)-f(a)}{h}$

Slope of tangent line:

Slope of tangent line: $\lim_{h \to 0} \frac{f(a+h)-f(a)}{h}$
